## Capitol Tulips

Each fall approximately 24,000 tulip bulbs are planted in 28 beds, producing a picture perfect spring setting.

In spring of 2005 a fungal disease, which was diagnosed by University of Wisconsin scientists, was found in the Capitol tulip beds. Summer tulip sales were suspended going forward due to this finding.

In the past few years, tulips have been given away to staff/visitors during summer removal for the annual plantings to begin.

Information will be updated annually to provide information (dates) as to when this will occur.
